ERHARDT TM18 CUSTOM PROTECTION FOR YOUR PATIO

The new TM18 terrace awning lets you relax in your favourite place in a pleasant, shaded atmosphere. The TM18 is impressive with its completely new design and its Zip technology, which eliminates the light gap between the guide rail and the fabric. It is suitable as a small, compact awning especially for terrace roofs and conservatories. Depending on requirements, the slim awning design makes either on-roof or under-roof mounting possible.

The two elegant lateral guide rails are mounted using special spacers. These rails offer the option of supplying the fabric either with a Zip function or with the more conventional gap. Several units can be mounted next to each other, even if they have different projection lengths. An extensive range of accessories, such as lighting rails, heating elements and wireless motors with special sensors for sun, rain and wind, are available for the new awning. With its fresh design and wide range of options, the ERHARDT TM18 gives you customisable protection from the sun for your terrace.

ERHARDT TM18

ONE PRODUCT MANY OPTIONS

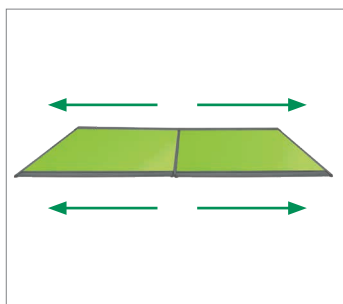

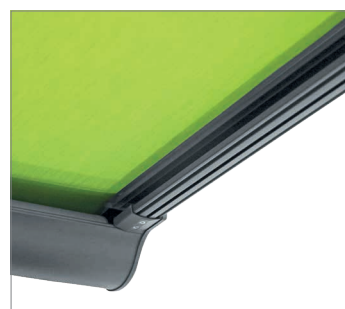

Design

The new TM 18 terrace roof awning has been manufactured in a brand new, modern design. Clear, gentle contours produce a harmonious and visually pleasing overall look. The awning fits perfectly into the terrace roof, either as a covered under-glass awning or as the ideal protection from the sun as an on-roof awning.

Zip

As standard, the new guide rail is always designed with the lateral zip function on the fabric, meaning that there is no longer a light gap between the fabric and lateral guide rail. The design of the rail is flexible, so that the conventional option with a fabric gap at the side can be supplied.

Size

The use of state-of-the-art technology allows sizes of 600 x 450 cm for under-roof mounting and 500 x 450 cm for on-roof mounting. Even larger units can be created by combining several awnings.

Mounting bracket

ERHARDT Markisenbau places great value on high-quality, easy assembly. Mounting brackets help meet these demands when installing the awning under an ERHARDT terrace roof and allow the awning to be assembled extremely quickly.

Flush drop profile

To complement the lateral zip function, the front drop profile closes flush, giving the awning a harmonious overall look and practically eliminating the light gap between it and the terrace roof purlin.

Very easily accessible revision cover in the drop profile

Revisions and adjustments on the drop profile can be made easily from the front and from below. It is no longer necessary to extend the awning, as the revision cover can be opened and closed again from the front with a minimum of fuss.

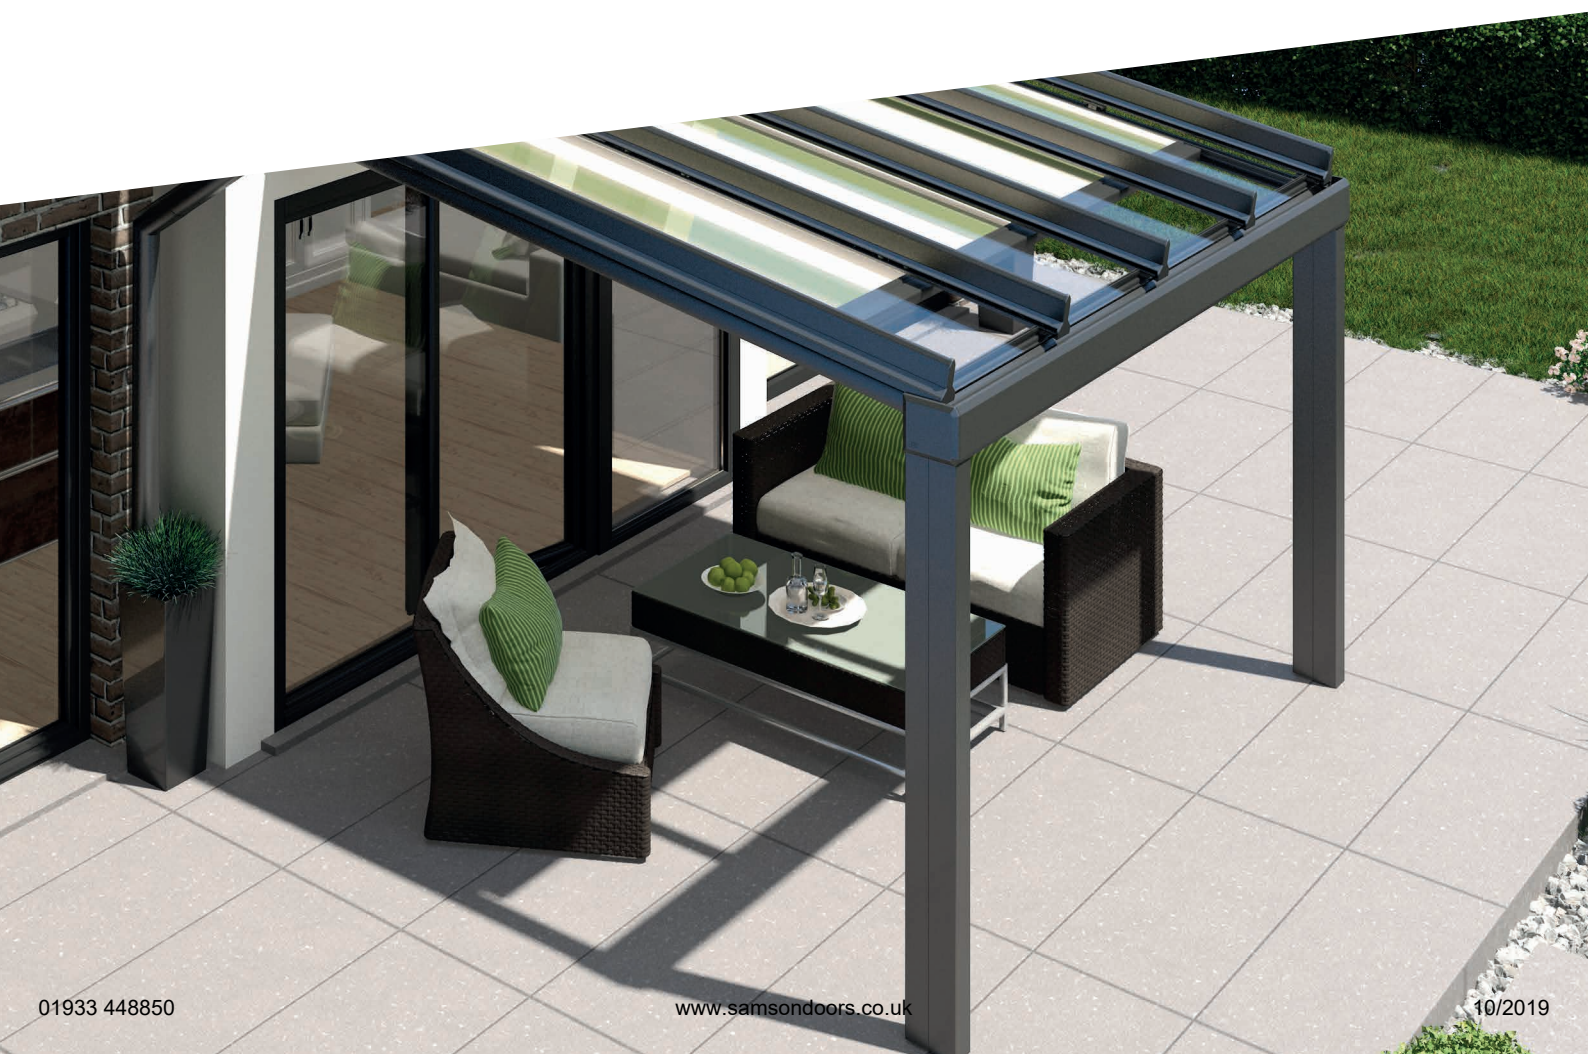

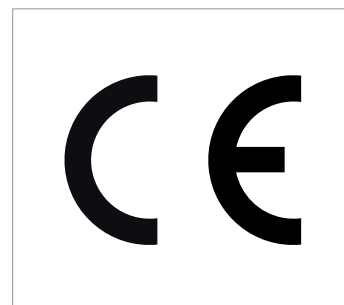

Almost invisible screws in the end cover area

The end covers are secured with special, concealed brackets and almost invisible inner hexagonal screws, meaning that there are no large screw heads to disturb the elegant overall design.

Made in Germany

ALL ERHARDT awnings are made in Burtenbach, Bavaria. All-round service and continuous production control guarantee high quality.

ERHARDT TM18 AT A GLANCE

All of the ERHARDT TM18 features

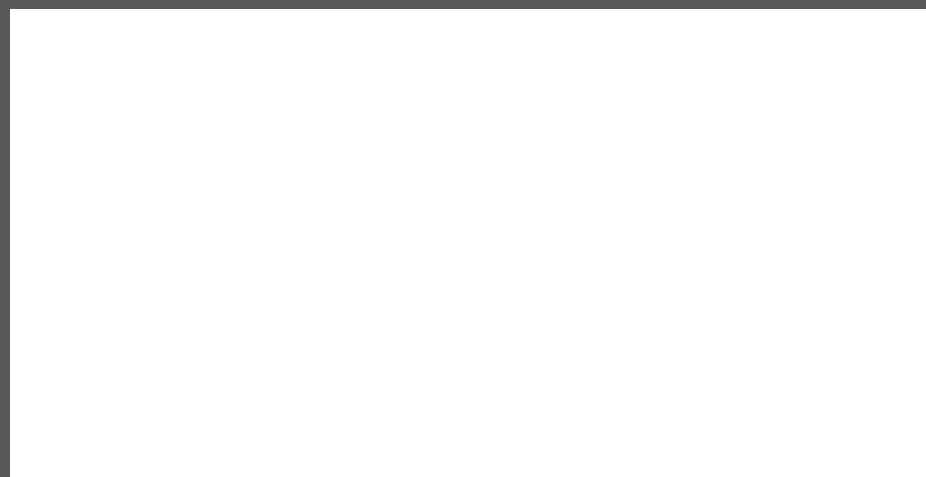

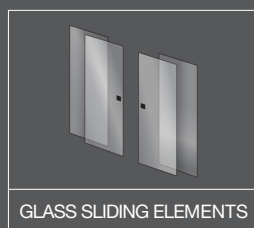

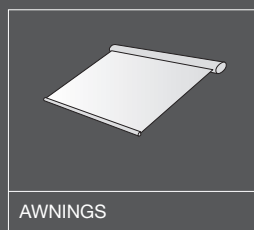

Minimum width	100 x 250 cm
Maximum dimensions (width x projection)	Under-roof mounting 600 x 450 cm On-roof mounting 500 x 450 cm
