

Operating convenience

Radio controls for weinor products

Switch off and switch on again – at your convenience

Just switch-off and relax – with innovative radio control from weinor. Not only can your awning, retractable roof or sun protection elements of your Glasoase® be operated with ease, but also your lighting and heating. You can also just leave the control of your awnings to the weather sensors.

BiConnect:
Intuitive radio controller for
weinor patio products

The weinor BiConnect radio controller offers particularly easy control of weinor sun protection, patio heating and light. When you use weinor BiConnect, operation of weinor products becomes particularly easy and intuitive. No matter whether you're using a hand transmitter, iPhone or iPad: You will receive direct information on the status of the weinor products.

io-homecontrol®:
integrates weinor products into
a building automation system

The io-homecontrol® radio controller system from Somfy allows integration of weinor products into a complete building automation system. This means that weinor products are controlled together with roller shutters, garage doors and other building services using a single desktop on a smartphone, PC, laptop or tablet PC.

weinor BiConnect radio controller

weinor BiConnect radio technology – for a more comfortable alfresco living environment

If you want intuitive, easy operating products for your outdoor area, you could not do better than choosing the innovative BiConnect radio controller from weinor. BiConnect is configured to weinor products, down to the finest detail, and provides feedback on the execution of a command. State-of-the-art routing technology ensures that the radio signal always reaches its target safely. If it's a sunny day, BiConnect weather sensors open the awning automatically, providing pleasant shade. Whilst they will close automatically if it gets too windy or rain starts to fall. The weinor BiEasy app offers total operating convenience so that using it even areas with several weinor products can be easily controlled via an iPad or iPhone.

BiConnect
Simply intuitive.

State of the art radio technology – for unparalleled comfort

Sit back and relax: With BiConnect radio control technology from weinor, you can control your entire range of weinor products – from sun protection to luxurious LED patio lighting and heating. Up to 15 different devices or device groups can be controlled with a single hand transmitter. The feedback function within the display tells you whether a command was executed or not.

Alternatively, you can control your Alfresco living products with io-homecontrol® by somfy.

Controlling weinor radio technology is both simple and versatile, with a variety of control options

If you want to control an awning and it's accessories, then the BiEasy 1M or 5M hand transmitters with LED feedback function are just perfect.

The advanced BiEasy 15M with display is ideal for the operation of multiple devices – such as several different awnings or retractable roof products. It is also perfect for operating the shading, lighting and heating for a weinor Glasoase®.

In addition, you can easily control weinor products via an app on your iPhone or iPad.

Somfy io-homecontrol[®] – comfortable living through radio technology

If you currently control your building technology (e.g. roller shutters, light, internal shading, garage door) with the io-homecontrol[®] radio control system from Somfy, then you can integrate weinor products fully into this system. This means you can control your weinor products and your entire building services using a single interface – configured as you like, with a smartphone, PC, laptop or tablet. Products can be added or removed at any time, and when installed and programmed they are fully integrated immediately.

Intelligent building control

In a Somfy Smart Home, it isn't the technology that takes priority – your needs and lifestyle habits are the main focus. Whether you're conveniently operating the patio awning from your sun-lounger, using your tablet or smartphone to activate the alarm system or close the garage door. Or even control the central heating – operation is simple and intuitive at all times.

You can control almost anything in a Somfy Smart Home – even over the Internet using your smartphone or tablet

- Roller shutters
- External blinds
- Patio awnings
- Window awnings
- Interior blinds
- Curtains
- Security shutters
- Garage doors
- Entrance gates
- Alarms
- Security sensors
- Smoke alarms
- Cameras
- Front doors
- Window operating gear
- Roof-lights
- Heating systems
- Weather sensors
- Lights
- Power
- Power measurement

Intelligent automation for the home

With the Internet-based Smart Home System from Somfy, you can even control all of the technology in your home using your smartphone, PC, laptop or tablet – it's extremely easy and user-friendly. Your weinor products featuring io wireless technology can be integrated without much effort.

Certain products within the weinor range can only be controlled to their maximum performance when operated by weinor control systems. Your weinor partner will be happy to help you find additional products.

io radio controller with weather sensors

With io-homecontrol®, your weinor awning can not only be integrated into the building automation, but can also be equipped with additional battery or solar-powered sensors. These will extend or retract your awning or retractable roof automatically, according to the weather situation.
