

Saddled roof carport single and double

A saddled roof carport could be the perfect choice for you. Whether it perfectly matches the style of your home or you fell totally in love with the design; we encourage your choice.

Protect your car

A carport is the ideal way to protect your car from the weather all year round. This way your car is protected against rain, snow, frost, falling leaves and falling branches in autumn and winter. And in summer and spring against extreme weather conditions, such as hail and UV radiation.

Maintenance free

The saddled roof carports of Gardendreams are manufactured in high-quality aluminium. The advantage of an aluminium carport is that it is maintenance-free and lasts for a very long period of time. In addition, it gives a modern look that fits any home.

The clearance width of the single saddled roof carport is 336 cm. The clearance width of the double saddled roof carport is 578 cm.
