Checklists & Components

Equipment Required

- 2 x Step ladders or hop ups
- Spirit level
- Tape measure
- Power drill
- Pozi- screwdriver or drive bits
- 4mm, 7mm and 10mm Metal drill bit
- 7mm Masonry drill bit
- Hacksaw
- Small electrical screwdriver
- 4mm A/F Allen key
- Permanent Marker Pen
- Silicone Gun
- Silicone Sealer

Rollerdor Component Checklist

- Top Box Assembly: consisting of Barrel, motor, tub end, locking straps, header plates Qty 2, front (L shape) & rear (C shape) case, slats, endlocks and base rail with rubber (safety edge will be on base rail if purchased).
- One Pair of Guide Runners.
- Winding handle with stem or external override system.
- Control System.
- Fixings Kit (Qty 10: 5 x 50 screws 7mm brown rawl plugs, plastic caps and Qty 1 plastic adjustment wand).

Please note: fixings supplied work on the majority of materials but if you know that you require specialized fixing please replace with these.

Door Overview

Please check all components for any visible damage, if there is any please contact your supplier.

- | | |
|--------------------------|--|
| 1 Head Plate | 9 Motor Plate |
| 2 Guides | 10 Guide Rail |
| 3 Full Box | 11 Plastics Caps |
| 4 Tube End | 12 End Lock |
| 5 Barrel | 13 Base Rail |
| 6 Security Straps | 14 Handsets |
| 7 Curtain | 15 Receiver Box and switches (if any purchased) |
| 8 Motor | |

Diagram 1

These fitting instructions are for guidance only, you should always assess your building construction for installation as each opening has its own specific needs.

Please read these instructions carefully and in full before commencing the installation of your TD55 product.

Important Safety Instructions

The TD55 must be installed and operated in accordance with the instructions supplied; failure to do so could result in damage to your door and compromise your safety.

Warning And Guidance Notes

- 1** At least TWO people are required to install this product.
- 2** Prior to installing please remove all rings, watches and sharp objects to avoid any possibility of damage.
- 3** Prior to installing please remove any items of loose clothing to avoid any risk of entanglement or injury.
- 4** Your TD55 comes complete with a 3 pin plug as standard (this is supplied and must be fitted with a 13amp fuse) which should be plugged straight into a 13amp 3 pin switched socket in the vicinity of your door, should you need any extra electrical work. This must be carried out by a suitably qualified person, if you have any doubts please consult an electrician.
- 5** Your control system should be installed in a location that is at a comfortable height to operate, but out of the easy reach of children.
- 6** Please do not allow children to operate the TD55 as serious injury can occur from misuse.
- 7** Warning: you must have a clear line of sight of the whole of your curtain when it is in operation. Failure to do so may result in harm to persons or damage.

1. Preparing Site for Installation

- 1 Opening Width _____ mm
- 2 Opening Height _____ mm
- 3 Headroom Height _____ mm
- 4L Side Room _____ mm
- 4R Side Room _____ mm

fig.1.1

fig.1.2

- 1 Check all measurements of your opening (fig.1.1) as well as the measurements of your new delivered TD55 against your confirmation (fig.1.2) to make sure everything is correct.
- 2 Carefully remove any, frames, doors, shutters or anything else as required, so that you are left with a clear opening to work with.
- 3 Sweep down the sides and lintel with a stiff brush and clear all debris.
- 4 Make sure the opening is free from any raised metal or brick work.

2. Preparing Guide Runners for Installation

- 1** We use 2 types of guide runners whichever is supplied with your kit will be marked with the letter 'F' to indicate the front, as seen in (fig.2.1 type 1) and (fig.2.1 type 2). This marked face will fit against the wall for a standard back fixing or face out of the opening for a between fixing (fig.2.5).
- 2** Your guide runners are supplied oversize and need to be CUT down to size, check the lintel is level then measure from floor to lintel both sides before referring to (fig.2.6) and making the cuts as necessary (for best results the cut end on wants to be on the floor when installing).
- 3** Offer both cut guide runners up against the walls they will be fixed to and mark the fixing points, either on the flat face for a behind fixing (fig.2.3) or for a between fixing in the opening (fig.2.4). For best results these should be as follows;

- A** Top fixing between 50mm to 100mm down from the top of the guide rail.
- B** Bottom fixing 50mm to 100mm up from the floor.
- C** Marking as many fixings as necessary but must be at least one extra fixing, spread these evenly between the two already marked points on the guide runners so that you have a secure fix.
- D** Drill a 7mm hole all the way through each of the marks on the guide runners and then drill a 10mm hole to countersink through the first layer only so you can get the screw head through.

fig.2.1 type 1)

fig.2.1 type 2)

fig.2.2

fig.2.3

fig.2.4

fig.2.5

Fixing Options

Below Lintel Fixing:

Cut guide runners to measured height less 210mm.

Limited Opening Fixing:

Measure from floor to highest point, deduct 210mm and cut guide runners to size.

Behind Lintel Fixing:

Cut guide runners to measured height.

fig.2.6

3. Installing Header Assembly

- 1** Place your hop ups / step ladders and one guide runner each side of the opening.
- 2** If you have a safety edge system on your TD55 then check the header plate stem as you may need to remove the securing screw (**fig.3.1**).
- 3** With 1 person at each end, carefully lift the header plate up into place and insert into the hollow section of guide (**fig.3.2**), this can be made easier by slightly tilting the guide runner. Please note* if you have a safety edge system you may need to feed the base rail into the mouth of the guide runner.
- 4** Lift the whole unit flush into place and check that the top box and guide runners are plumb level and square (**fig.3.3 & fig.3.4**).
- 5** Drill your fixing through the top hole in the guide runners and secure into place (**fig.3.5**).
- 6** Check the case and guide runners are still level and square, then proceed to drill a 7mm fixing through the remaining holes, remembering to check the guide runners are square and plumb after each fixing.
- 7** Check to make sure all fixings have not caused the front fascia to be pulled in, as this will rub against the slats causing damage and scratching to the face.
- 8** Making sure 1 person is holding the back case in place remove any screws from each end and keep safe for later, then lift the backcase up so it can be removed to expose the curtain of the door (**fig.3.6** & (**fig.3.7**).

fig.3.1

fig.3.2

fig.3.3

fig.3.4

fig.3.5

fig.3.6

- 1** (For IMO system) remove winding stem from your winding handle where it has been taped securely (**fig.3.10.IMO**). (For EMO system) remove metal shaft via the plastic circlet (**fig.3.8.EMO**).
- 2** Remove screw from end of stem and keep safe for later.
- 3** You may need to cut cable ties (**fig.3.9**) to release curtain then feed base rail into the mouth of the guide runner.
- 4** Insert winding stem through pre-drilled hole in header plate. Turn to release more curtain into guides, roughly 8 slats in total, remove winding stem and keep safe for later.

fig.3.9

fig.3.7

fig.3.8.EMO

fig.3.10.IMO

4. Installing Control System

ANSA Wireless S/E Kit
see pdf downloads for further
information

5. Setting Motor Limits (STANDARD MOTOR)

- 1** Press and hold the up button on receiver box so the curtain starts to roll up around the barrel, keep going until the motor stops or press the stop button if you get to 300mm (roughly 4 slats) from the top.
 - 2** There are 2 straight line arrows on the head of the motor, these are to show you the direction that the limit nearest to it controls, place the plastic wand in to the limit with the arrow pointing towards the front case (**fig.5.1**) and turn 10 times in the negative direction, negative (-) and positive (+) are marked on the head of the motor and are the same direction for both limits.
 - 3** Press and hold the up button and the curtain will travel to the top and should stop on its own, if the curtain gets to 100mm from the top of guide runners (roughly 2 slats) and hasn't stopped, then stop the curtain and take it back down to 300mm from top of guides (roughly 4 slats) turn again 15 times in the negative direction, take the curtain up and repeat until the curtain does stop before it gets to 100mm from top.
 - 4** For Somfy Rollixo ONLY: Turn the limit towards the positive direction (+) and after each couple of turns, use the buttons on the control box to close the curtain slightly before opening it again each time moving a little higher. Keep doing this until there is one full slat in the guide runners. Take the curtain down a little and back up to make sure you are happy.
- For every other control system: Whilst holding the up button turn the wand in the positive direction and the curtain will start to judder up, keep going until there is only the last slat in the guides. Take the curtain down a little and back up to make sure you are happy.
- 5** Move the plastic wand in to the other limit with the arrow pointing towards you (**fig.5.2**) and turn 10 times in the negative direction.

**fig.5.1****fig.5.2**

- 6 Press and hold the down button so the curtain closes, it should stop before it touches the floor if this is not the case take the curtain back up 300mm off the floor and turn again 15 times in the negative direction, take the curtain back down and repeat until the curtain does stop before it reaches the floor.
- 7 For Somfy Rollixo ONLY: Turn the limit towards the positive (+) direction. After each couple of turns, open the curtain slightly and then close it each time closing a bit further.

For all other control systems: Whilst holding the closed button on the handset turn the wand in the positive direction and the curtain will start to judder down.

- 8 Keep repeating until the curtain is fully compressed and pressure is applied from the top via the locking strap. The ideal finish position of the curtain is to have the top of the guide runner exactly in the middle of the very top slat (fig.5.4) but no more than 1 full slat above the top of the guide runner (fig.5.3) if there is more than this you will need to remove the extra slats.
- 9 Once you are happy with your finished limit positions you will need to secure the top box, with the curtain in the closed position you will have access to the entire top box assembly. The securing fixings are best done forwards through the flanges of the header plate for a behind fixing (fig.5.5) or for a between fixing through the header plate itself.
- 10 Close the door down to make sure the curtain doesn't catch anywhere and the front case is not bowed in so as to rub on the curtain during operation, then seal down the sides and along the top case as needed (silicone sealant is recommended).
- 11 Take winding stem and screw. Insert winding stem into the motor through pre-drilled hole in header plate, then secure in place with screw on top.

fig.5.3

fig.5.4

fig.5.5

PLEASE NOTE! You will see there are optional fixing positions on the straps for them to be screwed to the barrel, these are not needed but if you would like to do this

PLEASE BE WARNED that no screws can be secured 650mm from the head of the motor as you will damage the motor!

6. Setting Motor Limits (SOMFY MOTOR)

- 1 Your somfy motor comes with a limit cap cover, remove and keep the cover safe for later (fig.6.1 & 6.2).
- 2 Using a screw driver press both limits all the way in so when you release they will click and hold in place (fig.6.3).
- 3 Press and hold the up button on receiver box so the curtain starts to roll up around the barrel, keep going until there is 1 full slat left in the guide runner.
- 4 Using a screw driver press in and release the coloured limit for the open / up direction as per diagram (fig.6.5).
- 5 Run the curtain down until fully compressed and pressure is applied from the top via the locking strap. The ideal finishing position of the curtain is to have the top of the guide runner exactly in the middle of the very top slat (fig.6.7) but no more than 1 full slat above the top of the guide runner (fig.6.6) if there is more than this you will need to remove the extra slats.
- 6 Using a screw driver press in and release the coloured limit for the close/down direction as per diagram (fig.6.5).
- 7 Run the curtain all the way to the top limit to check it stops in the correct position, then run the curtain all the way to the bottom limit to check it stops at the correct position and if happy, replace the cap to cover the limits (fig.6.1). If the limits are incorrect repeat procedure from start.
- 8 Once you are happy with your finished limit positions you will need to secure the top box, with the curtain in the closed position you will have access to the entire top box assembly. The securing fixings are best done forwards through the flanges of the header plate for a behind fixing (fig.6.8) or for a between fixing through the header plate itself.
- 9 Close the door curtain to make sure it doesn't catch anywhere and the front case is not bowed in so as to rub on the curtain during operation, then seal down the sides and along the top case as needed (silicone sealant is recommended).

fig.6.1

fig.6.2

fig.6.3

fig.6.4

PLEASE NOTE! You will see there are optional fixing positions on the straps for them to be screwed to the barrel, these are not needed but if you would like to do this

PLEASE BE WARNED that no screws can be secured 650mm from the head of the motor as you will damage the motor!

fig.6.5

fig.6.6

fig.6.7

fig.6.8

7. Installation of Back Case

- 1** Lift the back case to offer up into place and mark for winding stem and if needed the wire gland (**fig.7.1**).
- 2** Take down and place on a flat surface (**fig.7.2**), then cut out the slots needed (**fig.7.3**).
- 3** Clean up any loose or rough edges (**fig.7.4**).
- 4** Lift the back case up as close to the winding stem and gland as possible, hook the back case into the top lip where the two cases meet (**fig.7.5**) and slide across to go all the way to the edge of the header plate, making sure when it is all the way over that the whole of the two cases are slotted together.
- 5** With the self-tapping screw provided, secure through the back case into the bottom flange of the header plate on both sides (**fig.7.6**).

fig.7.4

fig.7.5

fig.7.6

Completed

8. Optional Extras - Installation RDEROM External Override Kit

- 1** Mark the height you require your external override to go through the wall and drill a 25mm hole through the wall all the way.
- 2** Place the longer thinner plastic tube into the hole so the end is flush with the front of the brick work (**fig.8.1**) the rest of the tube will be inside the garage (**fig.8.2**) mark tube where the wall line is and then cut the tube to size.
- 3** Detach the universal joint from the long internal arm by removing the pin and keep the pin safe for later (**fig.8.3**).
- 4** Use a 2mm allen key to remove all 4 grub screws from the cylindrical attachment and remove from bar (**fig.8.5 & fig.8.6**). Measure the length of the plastic tube and cut the bar from the universal joint (**fig.8.4**) so it is 120mm shorter than this measurement, then slide the cylindrical attachment back on the bar but only 20mm before securing in place with 2 grub screws (**fig.8.6**) remaining 2 grub screws are not needed.
- 5** Insert the shaft all the way into the plastic tube, then insert the tube into the wall from the inside, the tube should be flush on the outside (**fig.8.7**), with the universal joint vertical, mark the 2 fixing points then drill and secure to the wall.
- 6** Your external fixing plate is universal with directions of rotation depending on what side your motor is on, it needs to be put together with the lock (**fig.8.8**).

fig.8.1

fig.8.2

fig.8.3

fig.8.4

fig.8.5

fig.8.6

fig.8.7

fig.8.8

fig.8.9

fig.8.10

- 7** To assemble the lock first place the flat washer onto the lock cylinder, then slide the faceplate on the correct way round (left hand motor = close on the left, right hand motor = close on the right), then place the indented washer on with the indents facing inwards followed by the locking nut and tighten (**fig.8.9**).
- 8** Take the lock and plate to the outside and place in plastic tube the correct way up (if the lock wont go all the way in so it is flush against the wall you may need to adjust the barrel or cylinder on the universal joint), mark the 4 fixing points before removing and drilling fixings, reinsert the locking plate and fix into position (**fig.8.10**).
- 9** Remove the plastic clip from the end of the long shaft (**fig.8.11**) this will release the shaft for the motor, remove the screw from the end of shaft and the support collar then insert the shaft into the top box, once past the header plate place the collar back on and then continue to insert the shaft into the motor, once all the way through re attach the screw in the end to hold in place (**fig.8.12**).

fig.8.11

fig.8.12

- 10** Reconnect the universal joint at the wall to the long shaft making sure it is straight (**fig.8.13**) then take it up to the joint as the motor shaft end, you can change the angle by adjusting the position of the collar inside the header box and securing in place (**fig.8.12**), once happy with the position, measure, mark and then cut the long shaft to size.
- 11** Drill a 5mm hole in the end of the long shaft in line with hole in the joint, slide the large short plastic tube over the end of the long shaft (**fig.8.14**) then slide the long shaft into the joint before reattach the plastic pic through hole (**fig.8.15**).
- 12** The External override kit is now installed (**fig.8.16**) remove the lock and test to make sure everything works as it should by inserting the handle into the cylinder head hole (**fig.8.17**) making sure the handle shaft lines up and seats all the way in before turning.
- 13** Lastly check the handle inside to make sure this works as well, slide the plastic cover on the long shaft (**fig.8.14**) up to reveal the handle (**fig.8.13**), remove the metal pin (**fig.8.3**) to release the handle, bend joints to make handle shape and test before reattaching.

fig.8.16

Optional Extras - Installation RDEOBP External Override Kit

- 1** Your RDEOBP external override kit is made up of 3 parts (**fig.8.19**).
- 2** Mark the height you require your external override to go through the wall and drill a 22mm hole through the wall all the way.
- 3** Place the plastic tube into the hole from the front with the plate flush against the outside wall and mark the 4 holes for fixing the plate (**fig.8.20**).
- 4** Then go inside and mark the length to cut off the plastic insert (**fig.8.18**).
- 5** Remove from the wall, drill 4 fixings outside and cut plastic tube to size then reinsert in wall.
- 6** Insert universal joint at bottom of shaft into the plastic tube end and mark 2 fixing holes (**fig.8.21**).
- 7** Mark the length you need to cut the shaft to make fit with stem.
- 8** Cut shaft to size and drill a 5mm hole in the shaft so you can reapply clip to attach shaft to stem.
- 9** Drill fixing holes for universal joint.
- 10** Attach shaft to stem with clip and place universal joint into plastic tube and screw to wall (**fig.8.22**).
- 11** Remove lock and check to make sure the unit turns.
