weinor Livona – the essence of an awning

"Perfection is achieved, not when there is nothing more to add, but when there is nothing left to take away."

Antoine de Saint-Exupéry

Pure Design

Luminosity, airiness, freedom – al fresco living pursues a very unique aesthetic. Minimalistic and pure. Just like the new weinor Livona open awning. At its core: ground-breaking technology that requires minimal space. The result: an awning that appears to float in mid air and reveals swathes of fabric. Add to this a frame colour and fabric and you have more than just sun protection for a balcony or patio: a modern stylish element for al fresco living.

A sense of weightlessness: the steel support bar on the weinor Livona is tucked away virtually out of sight behind the roller tube. Putting the awning fabric in full view

Concealed technology: not a screw in sight. The brackets and gear drive are fully concealed. For a seamless design.

Magical light

Soft shimmer or bright intensity – very few other media can lastingly alter the mood like light does. The fascination behind the weinor Livona LED stems from its atmospheric lighting that can be dimmed to whatever level is required. The LED Slim light bar and side LED light rings create spectacular effects. They generate a magical light and frame the patio in its true light.

Luminous fabrics

Vivid, haptic, warm – fabrics are a stylish addition to your patio design and create an ambience. With over 150 fabrics in the very latest tones, weinor's fabric collection meets personal requirements and the most discerning tastes. weinor fabrics are dyed through and through – for brilliant, enduring colour and lasting luminosity.

Quality

People who choose an awning want to use it for as long as possible. To get the longest use out of an awning, weinor has created a host of technical innovations.

The weinor LongLife Arm with high-tech belt is especially quiet and resilient: for high tension force and superb fabric positioning. This is backed up by a 10-year warranty.

The exceptionally high stability of the fabric roller and front profile provides for superb fabric positioning and outstanding winding.

The extra-rigid steel support bar has been designed in such a way that only two fixing brackets are required for awnings up to six metres wide.

Dirt simply rolls off the ultramodern nano-technology coating on the fabric. A solution-dyeing process ensures colours remain lastingly brilliant.

weinor has over 200 frame colours to choose from. Since these are powder-coated in our own factory, they are exceptionally colour-fast with an identical gloss level.

The weinor Livona open awning is available with or without the beautifully-shaped cover profile – ideal for any area of installation.

High-tech for joy of life

Convenience

Additional accessories make your time outdoors more enjoyable for longer. With spearheading technology, the intelligent accessoires fit supremely into the design.

The weinor BiConnect radio control makes operating awnings, lighting and heating a delight. Or you might want to opt for Somfy io-homecontrol® instead – the choice is yours. Weather sensors automatically operate the awning no matter what the weather.

Pleasing, warm white light is provided by LED spotlights on the light bar and the two light rings at the sides. These lights will last for an impressive 30,000 hours. The energy-efficient patio heater provides instant warmth with no pre-heating whatsoever. And they deliver an incredible 1,500 watts.

For very low-lying sun and prying onlookers, there is the vertical awning housed in the drop profile. The practical privacy and anti-glare screen opens and closes to any desired point.

Motorised or manual operation – whatever your preference, the weinor Livona can be driven in a number of ways.

weinor Livona – the essence of an awning

Important: for textile sun protection: creases occur during manufacture and when folding the awning fabrics. This can lead to the areas of the fold appearing darker when seen against the light, particularly with light colours. Folds in the hem, seam and fabric lengths occur where there are multiple layers of the woven fabric and different rolling thicknesses on the fabric roller. The resulting fabric tension can cause waviness (e.g. honeycomb or fish bone patterns). In principle, these effects occur to varying degrees in almost all awning fabrics. Creases and folds do not detract from the value and usability of an awning. Awnings and conservatory awnings are sun protection devices which should be retracted when it is raining or windy. Wet fabric creases more easily and as far as possible should only be retracted after drying out (please take care in strong winds and avoid pooling). Depending on the colour of the ordered frame, we supply all small parts as well as gear handles and drives for systems with gear drives in black (similar to RAL 9005), white (similar to RAL 9016) or grey (similar to weinor 7319).
